CORPORATE

NXT 4 GIVES YOU EVERYTHING YOU NEED TO CREATE
CORPORATE REFERENCE LIBRARIES THAT ARE SIMPLE TO
DEPLOY, COST EFFECTIVE TO MAINTAIN AND EASY TO USE

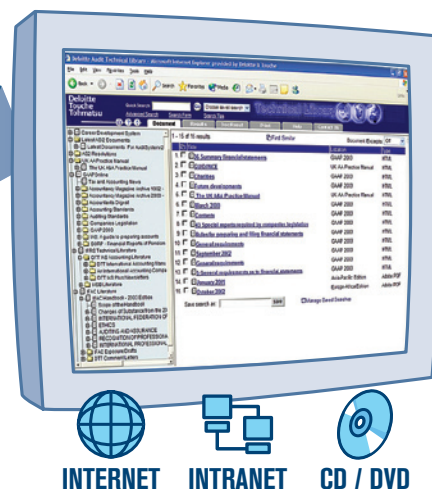

Information is both a valuable asset and an expensive burden. It fuels the success of your business. But how do you go about making up-to-date information available to all your employees—even when they're not connected to the network? How can you lower the costs of assembling and distributing information to online and offline users? And how do you eliminate the risks and lost productivity that occur when people can't find or access the latest, most current information?

These are difficult, complex questions. And NextPage is ready to answer them. NXT 4 is an electronic publishing suite that gives you a single, integrated process for storing, assembling, securing and delivering reference libraries—on your corporate intranet, to your employees' hard drives, over the Web or on CD or DVD. It makes the information your business depends on more accessible and useful—with powerful search and navigation tools. And it includes all the pieces you'll need to make new information available quickly, keep your existing content current and tightly control access to sensitive information. With NXT 4, you can lower the costs and risks of managing and maintaining your corporate information and make up-to-date content more available and useful to everyone in your organization.

POWERING YOUR INFORMATION DELIVERY

Complete Delivery Suite

A COMPLETE REFERENCE LIBRARY APPLICATION SUITE

NXT 4 ADDRESSES YOUR TOUGHEST INFORMATION CHALLENGES WITH ONE COMPLETE AND INTEGRATED SOLUTION

MAKE ACCURATE INFORMATION AVAILABLE TO ALL YOUR EMPLOYEES

Using separate systems to make information available to online and offline users is inefficient, time consuming and expensive. It's also dangerous. If you can't make new or updated information available to all your employees at the same time, whether they're connected or not, you expose your business to significant risk, especially if those employees are field service professionals, such as auditors, insurance underwriters or lawyers.

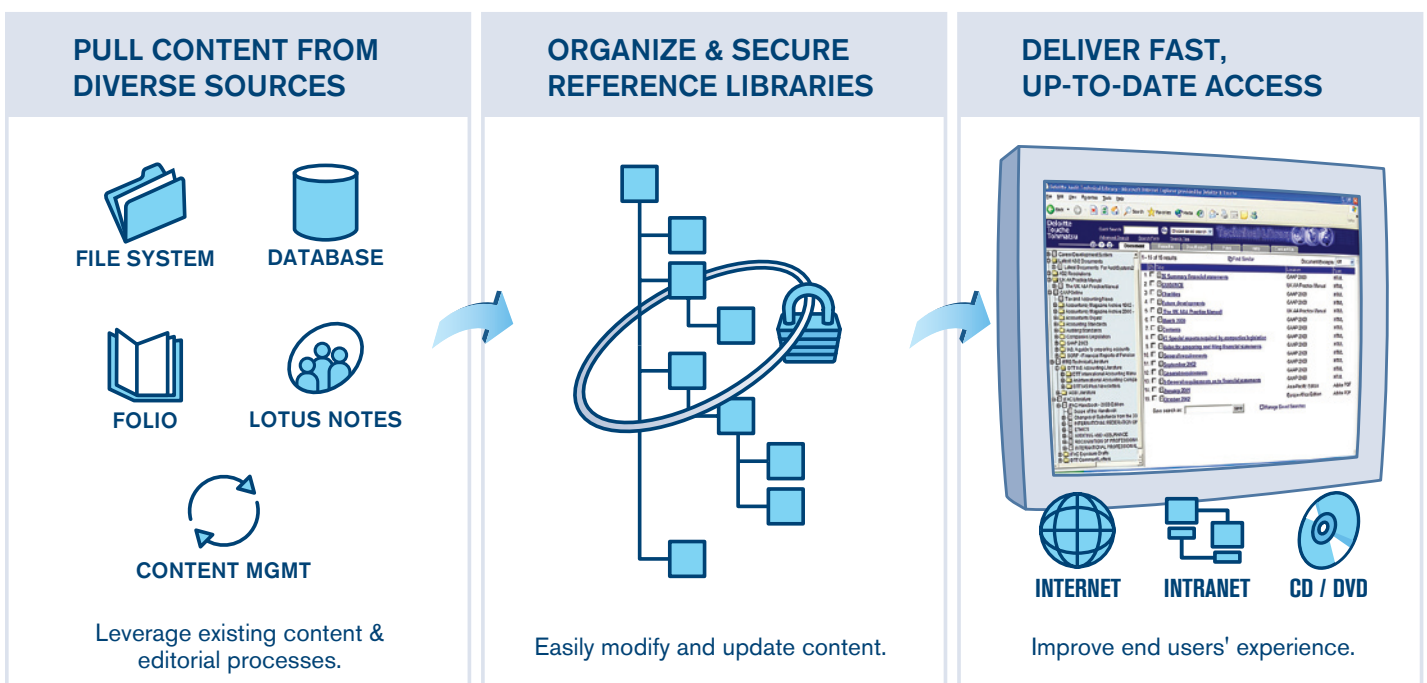

NXT 4 solves these problems and reduces your risks. You use one simple process to assemble, prepare and secure your content, and then deliver it directly to your corporate intranet or your users' hard drives. The Library Manager application makes it easy to assemble and update content from your file system, Folio® Infobases, Lotus Notes, ODBC-compliant databases and content management systems. And a unique incremental update feature even allows you to post updates on the Internet or your corporate network, so offline employees receive automatic updates every time they login. These capabilities combine to make new information available to all your employees more quickly—even when they're not connected. They allow you to assemble and manage all your information more efficiently and cost effectively. And they help you reduce risks and meet compliance requirements by making sure all your employees have access to the same collection of up-to-date information at the same time.

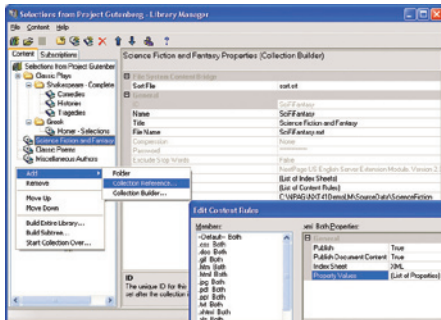

SECURE AND CONTROL YOUR SENSITIVE INFORMATION

With NXT 4, your most valuable information is always secure, protected and controlled—whether people access it online, from a local hard drive or from a CD. Flexible access control capabilities allow you to give individuals or groups access to specific documents or libraries of information. You can also use NXT 4 access control functions with your corporate directory services or existing access control systems.

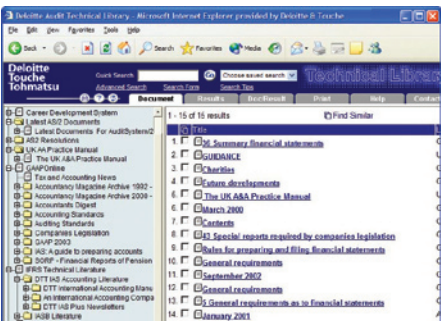

IMPROVE PRODUCTIVITY BY DELIVERING INFORMATION IN ITS MOST USEFUL FORM

To be useful, the information in your corporate reference library has to be accessible, easy to navigate and easy to find. With NXT 4, all the information you deliver includes a full-text index, table of contents, advanced search and navigation and the same intuitive interface—whether information is accessed on your intranet, from a local hard drive, over the Web or from a CD. NextPage's search and navigation tools are designed for professional researchers. They go far beyond ordinary Web search tools. And they improve the productivity of everyone in your organization by allowing them to find and use the information they need more quickly.

NXT 4 makes it easy to assemble content from different sources and make it available to online and offline users.

NXT 4 offers powerful tools for navigating, searching and viewing content.

LOWER THE COST OF BUILDING AND MAINTAINING YOUR CORPORATE REFERENCE LIBRARY

NXT 4 provides you with integrated technology that simplifies and automates the process of making information available online and offline to the people who need it. This includes the following:

- A flexible data store
- A powerful search engine
- A configurable presentation layer that includes a dynamic table of contents
- Advanced security and access control
- Browser-based applications for delivering information to your intranet, to employees' hard drives, over the Internet and on CD or DVD

With NXT 4, all these pieces come together in one unified package, so you don't have to worry about maintaining and integrating products from different vendors. This integrated approach means less complexity, more unified processes and substantially lower costs for your business.

UNIFY ALL YOUR INFORMATION

Sometimes, it's simply not practical to manage all your corporate information in a single physical location. With NXT 4, you can have one view of information located in different locations and in different formats. This means people can search, navigate and view information from different databases, Folio Infobases, Lotus Notes databases, ODBC databases and other sources using the same consistent interface. In addition, NextPage's unique Content Networking feature allows you to make content from different locations appear as a single, unified body of searchable information. And it allows you to present information from different sources in a consistent, searchable format—even when that information is coming from an external content provider.

EXPERIENCE AN ENTERPRISE STRENGTH SOLUTION

Fast, reliable access to information is critical. You simply can't afford outages, disruptions or downtime. NXT 4 is built to handle the demands of the world's largest businesses, and it has enough horsepower to deliver your information to thousands of people every day. With NXT 4, you gain the peace of mind that comes from using a proven electronic publishing suite that's designed specifically for corporate reference libraries. NXT 4 also includes a Software Developer's Kit that gives you the flexibility to integrate NXT with your existing systems, customize the user interface and adapt the solution to meet your unique needs.

NXT 4 GIVES YOU EVERYTHING YOU NEED TO MAKE YOUR REFERENCE LIBRARIES MORE USEFUL:

- A complete, unified solution that allows you to deliver and maintain reference information libraries quickly, efficiently and inexpensively
- A single process for publishing and maintaining online and offline information simultaneously
- Content Networking capabilities that make information from many different sources appear as a single, searchable body of information
- A consistent, intuitive interface for searching, navigating and viewing online and offline information
- A fast, reliable and scalable infrastructure capable of delivering gigabytes of information to thousands of people every day

NEXTpage nxt⁴ PUBLISHING SUITE

NXT Online Server

The core system for delivering online content over the Internet or corporate intranets.

NXT Solo Client

A browser-based client that provides access to offline information. NXT Solo gives your employees a rich, industrial-strength interface for searching, browsing and viewing the information you publish to their hard drives or on CD or DVD.

NXT Builder

The application and tools that make it easy to assemble, prepare and deploy information through the NXT Online Server or NXT Solo. NXT Builder includes tools for confirming, optimizing and pulling content into your reference library from existing systems.

NXT Content Bridges for ODBC and Lotus Notes

NXT Builder plug-ins that create NXT 4 content collections from ODBC data stores or Lotus Notes databases.

NXT Folio Content Bridge and Folio-to-XML Converter

Utilities that create NXT content collections from Folio Infobases or convert Infobases into XML for use with the NXT 4 system.

NXT SDK

A software developer's kit that provides APIs, documentation, and samples for extending security, expanding search capabilities and customizing the NXT Server user interface.

EXPLORE THE NXT 4 DIFFERENCE

NXT 4 is ready to change the way you create and maintain your corporate reference library—with a single production process, a richer user interface and more options for publishing and using electronic information. For more information, please contact a NextPage® partner or sales representative at 1-800-NEXTPAGE or 801-748-4500—or visit our Web site at www.nextpage.com/nxt4.
